Portfolio Manager Summary

- **Data Centers – Accelerating yet again**: The Data Center (DC) end-market saw another robust quarter in 1Q26 with aggregate sales up +84% y/y, outperforming all other end-markets (yet again). However, the more important takeaway is that the pace of spending on DC-/AI-related semiconductors has continued to pick up as 1Q26 marks the 3rd consecutive quarter in which y/y DC revenue growth rates have accelerated. Considering the positive YTD revisions to cloud capex and the fact that there tends to be an upward bias to out-year cloud capex estimates, we believe there is room for DC revenues to continue going higher, and on a relative basis, this should provide upward revenue estimate revision potential to companies with higher DC exposure including: **NVDA**, **AVGO**, **AMD**, **INTC**, and **MRVL**.
- **Automotives and Industrials – Cyclical setup looks favorable**: Trends in core semiconductor end-markets like Automotive and Industrial continued to improve in 1Q26 with aggregate y/y sales growth in both sectors continuing to accelerate from prior quarters. In the case of Autos (+11% y/y), 1Q26 marked the 4th consecutive quarter in which y/y trends have steadily improved, whereas in the case of Industrials (+25% y/y), it marked the 8th consecutive quarter of accelerating y/y trends. Cyclical commentary on these end-markets has also generally improved over the last ~90 days, with some co's pointing out that channel inventories are now low enough to necessitate replenishment buying. All in, we expect both markets to continue steadily improving through the course of this year. Beneficiaries of this recovery would include **IFX**, **NXPI**, and **TXN** on the Autos side and **ADI**, **TXN**, and **QCOM** on the Industrials side.
- **Computing / Consumer / Wireless / Comms Infra – Mixed bag**: Year-over-year growth in the other broad-based markets was mostly positive in 1Q26 (ex-Wireless, which fell -11% y/y), but longer-term trends across these markets remain mixed (Computing/Consumer/Wireless decelerating while Comms Infra accelerating).

FIGURE 1: Quarterly End-Market y/y Revenue Growth (1Q26)

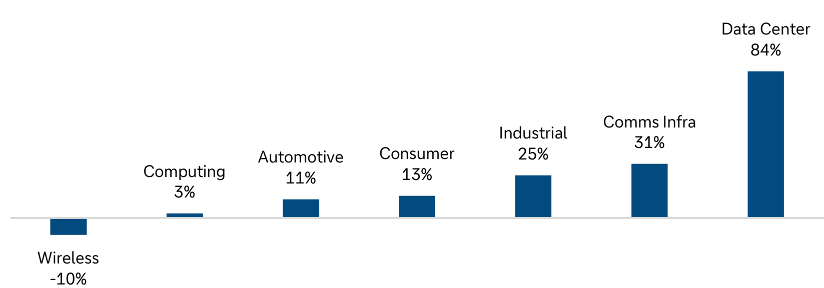

FIGURE 2: CY End-Market y/y Revenue Growth Estimates (2026E)

Note: Refer to our end-market model for additional details

Data Center

- DC revenues sequentially increased to $102.5b (+18% q/q) in 1Q26, growing well above seasonal 1Q norms (+1% q/q) due to robust DC-related revenue growth at companies like NVDA (+21% q/q) and AVGO (+26% q/q), which collectively account for ~86% of our DC dataset. Ex-NVDA, we note that DC revenues grew +16% q/q.
- More importantly, DC revenue growth accelerated to +84% y/y in 1Q26, indicating that the pace of spending on DC-/AI-related semiconductors is continuing to pick up rather than slow down. For context, this marks the third consecutive quarter in which DC revenues have accelerated (+49% in 2Q25 → +57% in 3Q25 → +71% in 4Q25 → now +84% in 1Q26).
- We expect increased infrastructure investments at cloud companies to continue driving DC revenues higher this year. However, we expect growth to moderate in 2027, as capacity additions slow the pace of incremental spending (DBe total DC end-market growth of +88% y/y in 2026 and +43% y/y in 2027).

Computing

- Total Computing revenues fell to $14.7b (-5% q/q) in 1Q26 due to declines at INTC (CCG -6% q/q), NVDA (Gaming PC segment -2% q/q), and AMD (Client -7% q/q on seasonality). Despite being down q/q, we note that the decline in 1Q26 actually came in slightly ahead of typical Q1 seasonality (-6% q/q).
- Annual growth trends in Computing remained positive (+3% y/y) in 1Q26 but note that this marked a steep deceleration from the prior three quarters (+23% in 3Q25 → +16% in 4Q25 → now +3% in 1Q26).
- Looking ahead, we expect broader industry headwinds – especially those related to memory costs and availability – to start more meaningfully weighing on the Computing end-market's growth and our bottoms-up forecast suggests that y/y growth should continue to gradually decelerate through the course of the year (DBe ~flattish growth in 2026).

Note: Refer to our end-market model for additional details

Automotive

- Total Automotive revenues sequentially grew to $12.9b (+2% q/q) in 1Q26, exhibiting growth that was directionally in-line but marginally below typical Q1 seasonality (+3% q/q). Year-over-year trends were even more promising, as growth continued to accelerate for the fourth consecutive quarter with a meaningful acceleration versus the prior quarter (+11% y/y growth in 1Q26, up from +1% y/y growth in 4Q25).
- Commentary at the top auto semi companies is equally positive, with companies like IFX indicating that customer inventory levels are low enough that it is starting to see replenishment via rising order intakes. However, despite the recent improvements, companies maintain a cautious stance due to mixed expectations around lower light vehicle production volumes (a clear negative for auto semi revs) versus structural semi content growth (a clear positive for auto semi revs).
- All in, we think cyclical conditions are improving, which should pave the way for a return to growth in 2026 and 2027 (DBe +12% y/y growth in both years).

Note: Refer to our end-market model for additional details

Industrial

- Total Industrial revenues sequentially increased to $7.78b (+7% q/q; in-line with Q1 seasonality) this quarter, with growth being predominantly driven by strength at larger companies like ADI (+20% q/q) and TXN (+21% q/q), both of which have called out a cyclical rebound in their industrial businesses with secular growth opportunities like automation and robotics starting to gain traction once again. Looking at year-over-year trends reveals an even more constructive picture, as aggregate sales growth in the Industrial end-market has now accelerated for 8 consecutive quarters (+25% y/y growth in 1Q26, up from +16% y/y in 4Q25).
- From a cyclical standpoint, we're seeing a fairly positive setup: demand tailwinds are coming back into the picture while supply headwinds are abating (channel inventories have decreased in recent months, which should prompt a replenishment going forward). We think the net of these dynamics should play out favorably for the Industrial end-market and, as such, we expect annual sales growth to improve in 2026 and 2027 (DBe +23% y/y in 2026 and +13% y/y in 2027).

Consumer

- Total Consumer revenues sequentially fell to $1.61b (-10% q/q) in 1Q26, with most of the weakness stemming from large-cap companies like AMD and NVDA (collectively ~59% of our dataset), both of which saw declines in their Consumer businesses (e.g., AMD and NVDA's Gaming segments were down -15% q/q and -6% q/q in Q1, respectively).
- Year-over-year trends, on the other hand, remained positive (aggregate Consumer revs +13% y/y), with the caveat that growth has notably decelerated over the last two quarters (+75% y/y in 3Q25 → +33% y/y in 4Q25 → now +13% y/y in 1Q26). However, note that this deceleration, along with broader fluctuations in our Consumer dataset, is primarily tied to fluctuations in AMD's Gaming business as it accounts for nearly half of our Consumer dataset (~45% in 1Q26).
- From a bottoms-up perspective, we expect total Consumer end-market revenues to be down -15% y/y in 2026 with a +9% y/y recovery in 2027.

Note: Refer to our end-market model for additional details

Wireless

- Total Wireless revenues sequentially fell to $8.59b (-19% q/q) in 1Q26, with the q/q decline coming in well below typical first quarter norms (-8% q/q). The sub-seasonal decline was primarily driven by deterioration in QCOM's handset sales (DBe -23% y/y), which accounts for a majority of our Wireless dataset (~70%).
- Annual trends were soft as well, with aggregate Wireless revenues falling -10% y/y. Note that this marks a continuation of the deceleration we have seen in recent quarters, as y/y growth has progressively gone from +10% y/y in 3Q25 → ~flat y/y in 4Q25 → now -10% y/y in 2026.
- However, much like our Consumer dataset, note that our Wireless dataset is also heavily skewed by fluctuations at singular companies (e.g., Qualcomm, which accounts for nearly three-fourths of the entire dataset.

Communications Infrastructure

- Total Communications Infrastructure revenues sequentially rose to $2.11b (+12% q/q) in 1Q26, outperforming typical Q1 seasonal norms (-1% q/q) due to strong broadband-related growth at large-cap companies like AVGO (DBe AVGO's broadband sales +19% q/q in 1Q26).
- Annual trends in the aggregate dataset were also positive, with year-over-year growth in total Comms Infra revenues accelerating to +31% y/y in 1Q26, up from +15% y/y in the prior quarter (4Q25).
- Looking ahead, our bottoms-up Comms Infrastructure forecast calls for +27% y/y growth in 2026, with growth being primarily driven by communication segment-related strength at companies like AVGO, MRVL, and NXPI. We expect this growth to moderate to the HSD range in 2027, with our bottoms-up model specifically pointing to +7% y/y growth next year.

Analyst Certification

The views expressed in this report accurately reflect the personal views of the undersigned lead analyst about the subject issuers and the securities of those issuers. In addition, the undersigned lead analyst has not and will not receive any compensation for providing a specific recommendation or view in this report. **Ross Seymore**

Company Rating and Dispersion Key: The table provides a snapshot of Deutsche Bank's company research rating distribution across our covered companies. We also present the percentage of companies where Deutsche Bank has provided Investment Banking Services in the past 12 months and/or MIFID Investment and Ancillary services, in the past 12 months. Please see the key and definition of our rating below.
Note - percentages are rounded so may not total 100%.
Covered: The overall rating distribution across all companies under coverage with a rating.
w/Banking relation: Percentage of companies under coverage with a rating within each of the "buy", "hold" and "sell" categories for which Deutsche Bank has provided Investment Banking Services within the previous 12 months.
w/MiFID services: Percentage of companies under coverage with a rating within each of the "buy", "hold" and "sell" categories for which Deutsche Bank has provided MIFID Investment and Ancillary services within the previous 12 months.
Buy/Hold/Sell Percentages: These percentages reflect the proportion of companies within each category that have been assigned the corresponding rating, based on our 12-month view of Total Shareholder Return (TSR).

Rating definitions:
Buy: Based on a current 12-month view of TSR, we recommend that investors buy the stock.
Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.
Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.
TSR: Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield.
Newly issued research recommendations and target prices supersede previously published research.

Company Rating Dispersion and Banking Relationships

DBSI Companies under Coverage	Buy	Hold	Sell
Covered	57%	43%	0%
w/ Banking relationship	42%	36%	0%
w/ MiFID services	62%	51%	67%

Global Companies under Coverage	Buy	Hold	Sell
Covered	58%	41%	2%
w/ Banking relationship	45%	34%	27%
w/ MiFID services	73%	69%	93%

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively "Deutsche Bank"). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls ideas on the Research Website (https://research.db.com/Research/), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call idea represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls ideas, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (https://research.db.com/Research/) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. The index fixings may – by construction – lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited – up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the "Characteristics and Risks of Standardized Options", at https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://research.db.com/Research/ on each company's research page or under the 'Disclosures' tab . Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. "Moody's", "Standard & Poor's", and "Fitch" mentioned in this report are not registered credit rating agencies in Japan unless Japan or "Nippon" is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Please refer to Australian specific research disclosures and related information at https://www.dbresearch.com/PROD/RPS_EN-PROD/PROD0000000000521304.xhtml . Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG.

It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
