China Internet

Who Pays for the AI Build?

On Monday, 24 Aug 2026, Alibaba raised HK$80bn (US$10.3bn) through 710m new shares at HK$112.70, an 8.4% discount to last Friday's close and 3.7% of existing shares. The Hong Kong shares fell 8.5% on 25 Aug 2026, versus Tencent down 2.2% and HSTECH down 2.1%. Only 0.3% of Alibaba's share price move is the arithmetic of issuing at a discount, in our view; we estimate the abnormal repricing of existing holders at about US$19bn, roughly twice the cash raised. In our view, Alibaba's sell-off is too large relative to the actual shareholder cost. Therefore, we believe the market is treating Alibaba's equity raise as evidence that China's AI capex cycle is becoming economically dangerous. We, on the other hand, argue that the more accurate conclusion is narrower: Alibaba's AI investment cycle is likely longer than expected, but the underlying compute economics remain attractive and the three CSPs in our coverage universe have very different funding risks. We maintain Overweight on Alibaba, Tencent and Baidu and we recommend investors accumulate Alibaba into the September-quarter print.

- **What changed is our interpretation of the AI investment cycle's duration, not our FY27 capex estimate or view of compute returns**. We keep Alibaba FY27E capex at RMB200bn and treat the RMB270bn June-quarter run rate as a stress case. At RMB200bn capex, Alibaba's annual internal funding deficit is about RMB100bn, but the company has cRMB150bn of usable liquidity plus substantial debt capacity. So, liquidity or solvency is not the key risk. Four tests frame the transaction: the compute tranche is positive NPV on our vintage model (22% project IRR versus a cost of capital near 10%); EPS turns accretive from year two if at least 80% of proceeds become infrastructure but stays modestly dilutive at our 60% base mix; debt would have been about 3ppt better for EPS; and issuing below our HK$205 fair value reduces intrinsic value per existing share by about 1%. The placement is therefore not free, but neither does it resemble the value destruction priced on Monday, in our view.

- **Across the sector, three funding models are now visible.** Alibaba uses parent equity plus debt after a rerating. Tencent funds capex from operating cash flow, bonds and a RMB875bn investment portfolio. Baidu borrows and seeks subsidiary equity through Kunlunxin. Each route has a shareholder cost - direct dilution at Alibaba, foregone portfolio returns and tax leakage at Tencent, and dilution of the AI asset at Baidu. We think the read-across from Alibaba's placement to Tencent and Baidu is overstated.

- **The key risks to our thesis are observable.** Our Alibaba case weakens if mature ROIC on deployed proceeds falls below roughly 15%, the infrastructure share of AI spend approaches 40%, the three-year capex commitment rises materially above RMB380bn without a matching lift in external cloud growth, or compute pricing deflates as supply loosens.

What the market priced in the placement

The terms of Alibaba's equity fundraising are straightforward: 710m new ordinary shares at HK$112.70, HK$80.0bn gross, sold to investors outside the United States and settled on 26 August; proceeds are earmarked for full-stack AI capabilities including infrastructure. It is Alibaba's first primary placement since the 2019 Hong Kong listing and was upsized on long-term investor demand.

Table 2: Placement mechanism

Item	Value	Note
Shares outstanding before deal (bn)	19.17	
New shares (bn)	0.71	3.7% of existing; 3.6% of enlarged
Placement price (HK$)	112.7	8.4% discount to Friday close of HK$123
Gross proceeds (HK$bn/US$bn/RMB bn)	80.0/10.3/69.5	RMB at 0.86855 per HK$
Theoretical ex-placement price (HK$)	122.63	(19.17*123+0.71*112.7)/19.88
Mechanical transfer to new holders	0.3%	US$0.9bn
Monday close (HK$)	112.5	Down 8.5%
Peer benchmark move	Down 2.2%	Tencent, 24 Aug
Abnormal move	Down 6.3%	~US$19bn on existing shares
Placement multiple	8.4x FY28E PE	13.1x FY27E
Earnings yield at placement price	12%	EPS accretion hurdle, not cost of equity

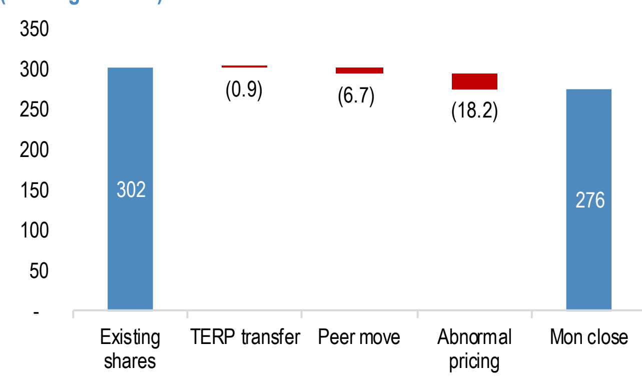
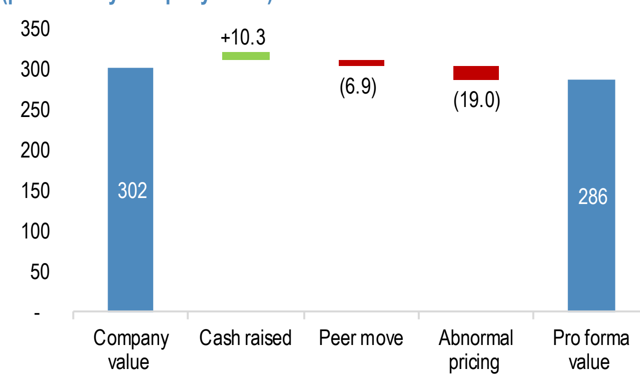
Figure 1: Separating transaction arithmetic from market reaction (existing holders)



Source: Alibaba company filing as of 24 Aug 2026, J.P. Morgan estimates, Bloomberg Finance L.P. as at 25 Aug 2026.

Figure 2: Separating transaction arithmetic from market reaction (post-money company value)

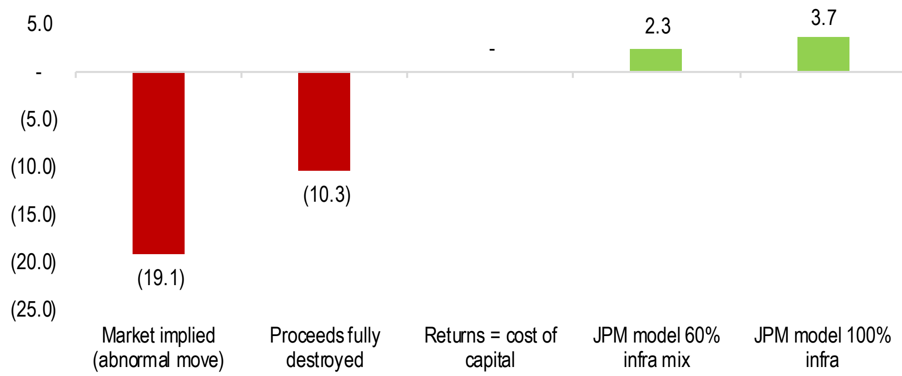


Source: Alibaba company filing as of 24 Aug 2026, J.P. Morgan estimates, Bloomberg Finance L.P. as at 25 Aug 2026.

Figure 1 separates transaction arithmetic from the market's broader reaction. Existing holders lost about US$0.9bn from the discount, roughly US$6.7bn from the peer move, and about US$18-19bn from abnormal repricing. On a post-money basis, adding US$10.3bn of cash still leaves pro-forma market value near US$286bn. The market therefore removed roughly twice the proceeds in abnormal value.

Alex Yao
(86 21) 6106 6505
alex.yao@jpmorgan.com

Figure 3: NPV on the proceeds implied by different readings of Monday



Source: J.P. Morgan calculations. Note: Market implied case uses the US$19bn abnormal repricing from Figure 2 against US$10.3bn raised.

Attributing the full abnormal move to this tranche requires every Rmb100 raised to destroy roughly Rmb185 of value. Even total loss of the proceeds explains only about US$10bn. Our vintage model implies positive NPV of Rmb36 per Rmb100 on the infrastructure tranche and Rmb22 at our 60% base mix. We therefore interpret most of the move as a repricing of the duration and scale of the broader capex program.

Sources and uses: the funding gap by name

We separate four items that investor discussion often blends: annual internally funded surplus or deficit, immediately available liquidity, incremental debt/equity capacity, and the number of months or years that each funding pool covers.

Table 3: Annual internally funded surplus or deficit (RMB bn)

	Alibaba FY27E (Mar-27)	Tencent CY26E	Baidu CY26E
Operating cash flow, WC normalized	135	310	15
Capex, base case	200	200	30

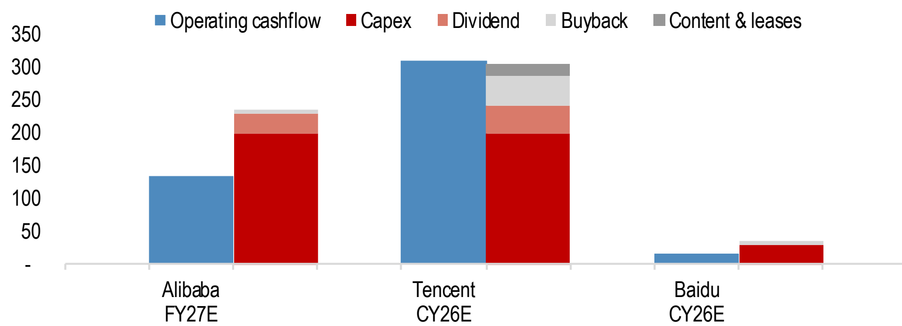
alex.yao@jpmorgan.com

Figure 4: Alibaba has the largest structural funding deficit; Tencent is broadly balanced (RMBbn)



Source: J.P. Morgan estimates, Company data as of 2Q26.

Alibaba: structural deficit, but ample funding capacity

At RMB200bn of capex, uses exceed operating cash flow by about RMB100bn a year; in the stress case, the gap is RMB170bn. The placement covers about 8.4 months of the base case and five months of stress case. The remainder is fundable from roughly RMB150bn of haircut liquidity and RMB debt at 2-3%, so solvency is not the issue. In the June quarter, net bank borrowings rose RMB11bn and prepayments increased roughly RMB69bn across current and non-current lines, which we read as including chip and capacity prepayments. Cash commitment is running ahead of reported capex. We expect more debt and potentially cloud-level financing over the next 12 months; a second parent placement would be a negative signal on returns.

Tencent: self-funding at the margin

First-half operating cash flow of RMB154bn annualizes to roughly RMB310bn against our RMB200bn capex, the RMB41.6bn dividend already paid and buybacks running near RMB45bn. Net cash fell from RMB146.9bn to RMB58.2bn in the quarter because the dividend and RMB51bn of compute prepayments landed together. Tencent also issued US$2.45bn and RMB15bn of long-dated notes in June, doubled short-term borrowings to RMB86bn, and saw accounts payable rise to RMB176bn from RMB121bn at December, consistent with chip payables. Behind that sits RMB487bn of listed and RMB388bn of unlisted investments. We see parent-equity risk as close to zero.

Baidu: weakest internal funding, least incentive to issue parent equity

June-quarter capex of RMB11.4bn against operating cash flow of RMB3.4bn was funded by RMB17.4bn of financing inflows: short-term loans rose from RMB7.6bn to RMB26.3bn and long-term loans from RMB3.4bn to RMB20.8bn, while lease right-of-use assets doubled to RMB18.6bn since December. After haircutting long-dated deposits and excluding iQIYI, about RMB100bn of liquidity still covers the base-case deficit for years. The constraint is not cash; it is the parent's low valuation and unwillingness to dilute. The equity route is Kunlunxin.

Table 5: Comparable AI cash commitment, June quarter (RMB bn)

	Alibaba	Tencent	Baidu
Reported Capex	68	53	11
+ AI-related prepayments in quarter	69	51	NA
+ Lease additions	NA	2	9 (vs Dec)

Three funding models - and what each costs

The three companies are making the same strategic judgment on AI with different balance sheets and different share prices. The rule that falls out is intuitive: issue parent equity when the stock has rerated and project IRR exceeds the earnings yield; recycle a portfolio when the portfolio is larger than the program; and raise at subsidiary level when the parent is cheap and the subsidiary is the AI asset. 'No parent equity' does not mean 'no cost'.

Table 6: Funding models and their economic cost

	Alibaba	Tencent	Baidu
Primary route	Parent equity + debt	OCF; bonds, portfolio disposals	Loans, leases, Kunlunxin equity
Explicit cost	3.7% more shares; interest on RMB266bn debt	Interest; tax on disposal gains	Interest and lease cost
Hidden/opportunity cost	Issuance below fair value (~1%/share at PT); rating headroom	Foregone returns/optionality on assets sold; market impact	Parent ownership of AI asset reduced
Illustrative cost of raising Rmb70bn	3.7% dilution; EPS drag vs debt ~3ppt	Tax + discount leakage RMB7-12bn; foregone return ~RMB6bn/yr at 8%	Kunlunxin stake ~67% toward 60% for RMB25-30bn; ~2% of group SOTP transferred
Why this route	Earnings yield below project IRR; offshore currency; permanent capital	Portfolio larger than program; capex framed as 2026-27 lump sum	Parentco valuation is low on 2027E basis; AI asset separable; lenders willing
What it reveals	Multi-year; funding extends beyond one procurement cycle	Bounded; compute resale as backstop	Scale gated by Kunlunxin proceeds
Next likely action	More debt; no second placement in 12m	Continued selective disposals	Kunlunxin listing; dividend maintained; buyback slow

Source: J.P. Morgan estimates, Company data as of 2Q26.

Tencent's disposals surrender assets that we believe the market under-credits, so the case for recycling rests on the spread between roughly 20% capex ROIC and a high-single-digit portfolio return, less leakage. Baidu holders give up part of the one asset that carries the thesis. Alibaba's cost is the most visible and easiest to price - one reason the market priced it hardest.

Alibaba placement: four separate tests

Positive project NPV, EPS accretion, the choice of equity over debt, and value per existing share are different questions. Treating them as one is the main source of confusion in the placement debate, in our view.

Test 1 - Does the infrastructure create economic value?

Yes, for the compute tranche. Our vintage model from our recently published note uses RMB1 of annual revenue per RMB1 of capex at full utilization, a 45% incremental EBITDA margin, 20% tax, a five-year straight-line economic life, and a 60% / 90% / 100% utilization ramp. Per RMB100 of capex, after-tax cash flows are (100) / 25.6 / 36.4 / 40.0 / 40.0 / 40.0, giving a 22% project IRR, 2.9-year payback and RMB36 NPV at a 10% discount rate. That reconciles management's sub-three-year payback and 13%+ blended ROIC.

The qualification is use of proceeds. Alibaba described the purpose as full-stack AI capabilities including infrastructure. Model training, application inference and customer acquisition are expensed inside AI Labs and Applications, which lost RMB13.9bn in the quarter, and have no auditable return today. We therefore adopt 60% infrastructure as the base mix and assume no measurable return on the non-infrastructure tranche.

Table 7: EPS effect by use of proceeds (% vs no-raise / no-incremental-capex baseline)

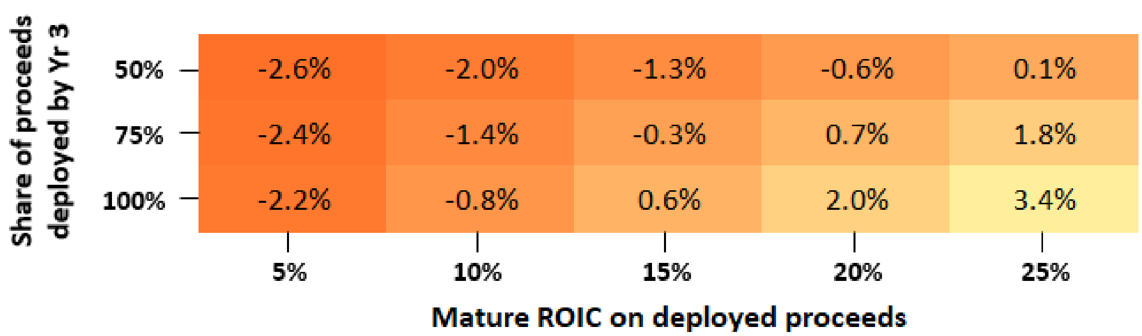
Infrastructure share	Yr1 FY27E	Yr2 FY28E	Yr3 FY29E	Yr4 FY30E
100%	(0.9)	1.6	2.0	1.5
80%	(1.4)	0.6	0.9	0.5
60% (base)	(2.0)	(0.5)	(0.2)	(0.5)
40%	(2.5)	(1.5)	(1.3)	(1.5)
Proceeds parked in cash	(2.8)	(3.1)	(3.1)	(3.2)
Memo: debt-funded, 100% infrastructure	1.6	4.6	5.1	4.6

Source: J.P. Morgan estimates.

Test 2 - Does the transaction increase EPS?

It depends on mix. At 80% or more infrastructure, the placement becomes accretive from year two. At our 60% base case, it is 0.5% dilutive in FY28E and roughly neutral thereafter. The same result expressed through ROIC is that year-three accretion requires a mature ROIC of roughly 15% when proceeds are substantially deployed. Cash left idle is dilutive under every scenario, which is why the September-quarter capex print matters.

Figure 7: Year 3 EPS effect by mature ROIC and deployment



Source: J.P. Morgan estimates.

Test 3 - Was equity the cheapest funding source?

No. The debt counterfactual is 3-3.5ppt better on each EPS line because RMB coupons of 2-3% cost far less than a 12% earnings yield. The case for equity rests outside the EPS bridge: offshore currency for procurement, rating and covenant headroom while consolidated free cash flow is negative, and permanent capital that does not need refinancing in the middle of a capex cycle. Those are legitimate benefits, but the choice was not free.

Test 4 - Does it create value per existing share?

This is the test an earnings-yield comparison does not answer. Issuing below fair value transfers value to new holders, so project NPV must exceed that transfer for existing holders to be better off. Using HK$205 as pre-deal fair value, post-deal value per share is HK$203.1 with full infrastructure NPV, a 0.9% reduction, and HK$202.6 at the 60% mix, a 1.2% reduction. The deal becomes per-share accretive only if pre-deal fair value is below roughly HK$153 at 100% infrastructure or HK$137 at our 60% mix.

Alex Yao
(86 21) 6106 6505
alex.yao@jpmorgan.com

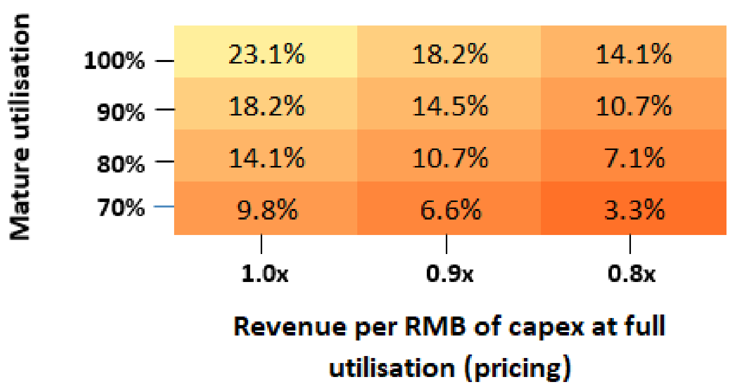
Four-test summary: compute creates value; the placement is roughly EPS-neutral at our base mix and accretive if infrastructure share is high; equity costs about 3ppt of EPS versus debt; and existing holders give up about 1% of intrinsic value at our fair value. None of that resembles a US$19bn abnormal pricing, but the accretion claim is conditional, and the next two prints will reveal the condition.

Capex trajectory and earnings absorption

The duration framing needs updating, but our FY27 capex estimate does not. A US$10.3bn equity raise five days after the print is evidence that management expects capex to stay high for longer than one procurement cycle. We keep FY27E capex at RMB200bn and use RMB270bn as the stress case.

Returns cannot simply be scaled with capex. A larger program at constant unit economics creates more value; the risk is that unit returns fall as supply expands. Flexing mature utilization and pricing together, the project still clears a 10% cost of capital across most of the grid. But 80% utilization with 10% lower pricing earns only about 11%, and 70% utilization with 20% lower pricing earns about 3%. This is how a bigger program becomes a worse one, and why RMB270bn is a risk case rather than upside.

Figure 8: Project IRR as scale pressure utilization and pricing



Source: J.P. Morgan estimates.

We believe the P&L absorbs the build regardless of financing. Under the same vintage economics, gross depreciation equivalent to one year's base-case capex is 28% of Alibaba FY27E net income, 13% of Tencent's and 23% of Baidu's. Yet incremental EBITDA exceeds depreciation from the first full year. The key risk is therefore EBITDA, utilization and pricing, rather than depreciation itself.

Table 8: Earnings absorption of base-case capex programs (RMB bn; vintage economics)

	Alibaba 200			Tencent 200			Baidu 30		
Program year	**1**	**2**	**3**	**1**	**2**	**3**	**1**	**2**	**3**
Incremental revenue	120	180	200	120	180	200	18	27	30
Incremental EBITDA (45%)	54	81	90	54	81	90	8	12	14
Depreciation (5-year life)	40	40	40	40	40	40	6	6	6
Incremental EBIT	14	41	50	14	41	50	2	6	8
Net income after 20% tax	**11**	**33**	**40**	**11**	**33**	**40**	**2**	**5**	**6**
Memo: gross depreciation/forecast NI	**28%**			**13%**			**23%**		

Source: J.P. Morgan estimates.

Trading the funding cycle

Dated events. Placement settlement on 26 August removes the technical overhang, while Baidu's EGM the same day gates the Southbound-flow story. Alibaba's September-quarter print is the main test: external cloud growth above 50%, AI Labs losses down sequentially, and capex consistent with prefunding. Hunyuan 4 is Tencent's evidence point; the Kunlunxin listing is Baidu's key funding event because it changes the ability to scale.

Precedents. BYD and Xiaomi both placed equity at 6-8% discounts in March 2025; both stocks opened lower and were later absorbed into rallies already under way. We treat those deals as context rather than valuation anchors for Alibaba.

Relative positioning. Tencent's premium multiple buys a fully internally funded program plus a RMB875bn portfolio. Alibaba has removed a funding overhang, while we think the market has over-priced the negative signal embedded in the raise. With the stock trading at 12x FY27E and 8x FY28E P/E, we would add into the September-quarter print. Baidu's parent dilution risk remains low because its equity route is at the subsidiary level.

What would change our view

- Alibaba raises its three-year capex commitment materially above RMB380bn without lifting external cloud growth guidance above 50%.
- Proceeds remain substantially undeployed for more than 12 months, visible in treasury balances rather than PP&E and prepayments.
- AI Labs and Applications losses fail to decline sequentially in the September quarter, implying a lower infrastructure share of spending.
- External cloud pricing deflates as supply eases; Figure 8 shows project IRR near 11% at 80% utilization and 10% lower pricing.
- A second parent-level Alibaba equity raise within 12 months.
- For Tencent, a quarter in which capex + dividend + buyback exceeds operating cash flow without a matching disposal.
- For Baidu, a Kunlunxin listing delayed beyond 2026 or raising materially less than needed for the stated capacity plan.

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Feb 07, 2010. All share prices are as of market close on the previous business day.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

Coverage Universe: Yao, Alex : Alibaba Group Holding Limited (9988.HK), Alibaba Group Holding Limited (BABA) (BABA), Alibaba Health (0241) (0241.HK), Autohome Inc (ATHM), Autohome Inc - H (2518.HK), Baidu.com (9888.HK), Baidu.com (BIDU) (BIDU), Damai Entertainment (1060.HK), DiDi Global Inc. J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.
**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.
U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
