We expect FII to keep its AI compute rack supply share for major GPU platforms and expand the inroads to AI ASIC rack solution. The ongoing automation upgrade and internal component sourcing help raise the operational efficiency and fuel margin.

Key Takeaways

- 1Q26 revenue growth is indicated at >15% YoY across the board with AI server rack shipment a major driver.
- Mechanical parts for upcoming foldable smartphones and CPO switches were in sampling in 1Q26 and both are scheduled for mass production by end of 3Q26.
- FII handles L5/L6/L10 assembly work for AI ASIC server customers and expects the contribution to be higher in 2H26 vs. 1H26.
- CPO switch assembly will become a new business driver for FII at both revenue and gross margin, starting from 3Q26
- 800G above switch, LEO satellite, CPO switch and foldable smartphones are major business drivers, in addition to Vera Rubin POD introduction.

Stay OW; new Rmb82.8 price target implies P/Es of 27x for 2026e and 20x for 2027e: We raise our earnings estimates 1.5% for 2026, and 5.2% for 2027, and introduce our 2028 estimates. We reflect enhanced output for AI server/rack integration work with further automation upgrade as well as favorable mix shift across different product lines. The stock trades at 19x 2026e P/E, still attractive relative to Chinese AI hardware peers' 33-80x.

Major business drivers in 2026: 1) CPU switch adoption will start to grow this year and FII expects to enter mass production (L10 assembly) in 3Q26 with >10,000 units this year. This is a margin accretive product line for FII; 2) FII aims to roll out L10/L11 integration work for VR NVL72 rack and Groq3 LPX rack (for inference) in 3Q26; 3) new AI ASIC customer addition (MSe Google) with contribution turning more meaningful in 2H26; and 4) increased component offerings – from liquid cooling, power delivery and high-speed data transmission – for new VR platform.

Vertical Integration for AI Server Offerings

FII is not only growing its assembly share from AI GPU servers to AI ASIC servers, but also increased component offerings, from liquid cooling, power delivery and high-speed data transmission, for new VR platform. We believe this vertical integration could drive increased profitability for its AI server business.

Valuation Methodology

We raise our price target 1%, from Rmb82.00 to Rmb82.80, primarily reflecting our higher 2026-27 earnings estimates. We continue to employ a multi-stage residual income (RI) valuation model, the same methodology that we use to value other companies in our Greater China Technology Hardware coverage.

Key assumptions in our RI valuation model are unchanged: cost of equity of 10% and terminal growth rate of 5%. Our new price target (which is also our base-case scenario value) implies 27x our 2026 base-case EPS estimate.

We raise our bull-case scenario value from Rmb123.00 to Rmb124.20 (same magnitude as the base case). This implies 40x our 2026 base-case EPS estimate. In this scenario, we assume faster progress in the AI server business and better-than-expected shipments of consumer products.

We raise our bear-case scenario value from Rmb44.00 to Rmb44.40 (same magnitude as the base case). This implies 14x our 2026 base-case EPS estimate. In this scenario, we assume slower progress in the AI server business and lower-than-expected shipments of consumer products.

In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice.
