Equity Snap: Tencent Holdings (700 HK)

Key takeaways from 2026 Tencent Global Digital Ecosystem Summit

Equities
Internet Software & Services

China

- Key focus on WorkBuddy, Hy and international expansion

Tencent Holdings (**700 HK**, HKD387.60, Buy, TP HKD600.00; **80700 HK**, CNY329.00, Buy, TP CNY542.00)
(Priced as of 28 Oct 2026)

WorkBuddy: Deeper usage, integration and support: 1) Adoption: Since launch in March 2026, WorkBuddy has completed 9bn user task requests. The enterprise version of WorkBuddy has been deployed across over 50 industries, and served 50% of China's Fortune 500 companies and 60% of China's top 100 companies. More than 50,000 partners and developers have joined the open platform, contributing to the over 200,000 skills available. **2) Launch of Buddy One which integrates other applications into WorkBuddy**: Users can enable the Buddy One – an unified account with a consolidated credit and data pool in WorkBuddy to seamlessly access Tencent Docs, Tencent Meeting, Tencent Drive, ima and other tools. It can call on different tools to generate multimodal content and different members of the team can collaborate to revise and review the outputs together on an ongoing basis. **3) Launch of Tencent Drive:** It provides unified storage for WorkBuddy, enabling accumulated work context and generated outputs to be stored securely and accessible at any time. **4) Integration of WorkBuddy into WeCom**: After WorkBuddy is connected with WeCom, communications, documents and meeting records in WeCom can be used by WorkBuddy to understand and perform tasks within the authorised scope. Enterprises don't need to change systems, move data or redesign processes and can convert these digital assets into inputs easily. Managers can also centrally allocate user licences, token quotas and access permissions. When an employee leaves the organisation, access can be withdrawn centrally.

Hy4 is coming soon: Compared with Hy4 Preview, it could deliver substantial improvements in handling of long-horizon tasks and real life productivity tasks. It could significantly improve chain-of-thought efficiency (i.e. reducing computational cost, token redundancy, and overthinking when inferencing, while preserving or improving accuracy) and introduce visual understanding for the first time. Moreover, Hy4 Flash could be launched soon, as a cost-effective alternative (co press release).

International expansion: In the past year, number of overseas customers on Tencent Cloud have doubled, covering over 150 countries/regions. The strategy is to: 1) accelerate development of global data centers: It has deployed over 2m servers globally. In the past year, it added or expanded data centers in Frankfurt, Malaysia, Mexico, Osaka, Riyadh, and Thailand; 2) build highly cost-effective infrastructure: It has further optimized hardware and software stack with better compute and storage management technology; 3) improve AI delivery capabilities: Overseas AI demand for Tencent Cloud has grown at triple digits rate in the past year. It will continue to fulfil demand for tokens, harness products, mini programs, audio and video solutions, etc.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

HSBC assigns ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Rating distribution for long-term investment opportunities

As of 30 September 2026, the distribution of all independent ratings published by HSBC is as follows:

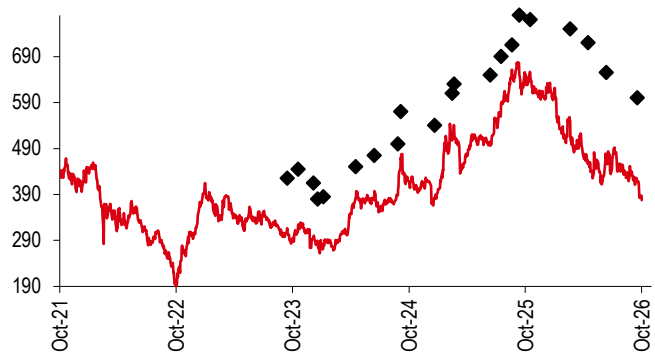

Buy	60%	(12% of these provided with Investment Banking Services in the past 12 months)
Hold	35%	(12% of these provided with Investment Banking Services in the past 12 months)
Sell	4%	(10% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at *http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures*.
