Focus on "I" Creates a Buying Opportunity

Alphabet delivered another strong quarter, with consolidated revenue of \$120bn, up 24% y/y and roughly 2% ahead of our estimate, led by Search revenue growth of 17%, YouTube ad growth of 13%, and an 82% increase in Google Cloud revenue. Cloud was the clear standout: revenue reached \$24.8bn, approximately 7% above our estimate, while operating income of \$8.8bn beat us by 26% and drove a 35.6% segment margin. Cloud backlog increased by more than \$50bn q/q to \$514bn, with slightly more than half expected to convert into revenue over the next 24 months.

The quarter strengthens our view that Alphabet is already monetizing AI at scale. AI Overviews and AI Mode are increasing total Search query volume, while Gemini is improving Google's ability to understand and monetize longer, more specific searches. AI Max is now out of beta with 500k advertisers, and advertisers adopting AI Max or Performance Max are generating approximately 15% more conversions or value at a similar return on ad spend. Search growth therefore looks durable, although the business faces a roughly 200bps tougher comparison beginning in 3Q.

Cloud's outperformance is equally important. Demand is broad across infrastructure, models, agents, data, security, and Workspace; nearly 90% of the Fortune 100 now use Gemini Enterprise; existing customers are consuming more than 50% above their contractual commitments; and Google's model APIs are processing 22bn tokens per minute, up from 16bn last quarter. **Google also delivered TPU systems into customer data centers for the first time, extending its opportunity beyond renting compute toward selling complete AI infrastructure.** In our view, Alphabet's integrated stack of chips, networking, models, software, security, and enterprise distribution is becoming one of the company's largest sources of incremental value.

The offset is capital intensity. Alphabet raised FY26 capex guidance to \$195-\$205bn from \$180-\$190bn and generated negative FCF of \$5.9bn in the quarter as capex reached \$45bn. Capacity remains constrained across internal and external demand, and the use of third-party bridge capacity is likely to create modest near-term pressure on Cloud margins. However, we view these pressures as the cost of bringing supply forward against visible demand. Alphabet must simultaneously support strategic Cloud customers, train frontier models, and fund inference across Search, YouTube, Gemini, and its enterprise products. Given the \$514bn backlog and accelerating internal workloads, the higher investment budget appears

IMPORTANT RESEARCH DISCLOSURES AND ANALYST CERTIFICATIONS LOCATED IN APPENDIX 1. Deutsche Bank does and seeks to do business with companies covered in its research reports. Thus, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

economically rational from our perspective.

Importantly, Alphabet now has three durable growth engines: advertising, Cloud services, and AI hardware, with Waymo providing an additional longer-term option. We believe this improving mix can support durable growth and a higher valuation as investors increasingly recognize Alphabet as an AI infrastructure and platform company rather than primarily an advertising business. Shares declined after hours as investors focused on negative FCF and the higher capex outlook (i.e. the "I") overlooking the expanding "R" in the ROI equation. **We maintain our Buy rating and price target of \$430**, which is based off 29x our FY27 GAAP EPS estimate (unchanged).

Search Remains Strong, and AI Is Expanding the Addressable Query Pool

Search revenue increased 17% y/y to \$63.3bn, modestly ahead of our expectations and essentially sustaining its FX-neutral growth rate despite a slightly easier comparison. The result directly addresses the most important debate for Alphabet: **generative AI is expanding total Search usage rather than simply redirecting existing queries into a more expensive interface**. AI Mode has surpassed 1bn monthly active users, and both AI Mode and AI Overviews are driving incremental searches. Alphabet is also sending billions of clicks to websites every week through AI-powered Search experiences.

The monetization opportunity is developing alongside engagement. Users are asking longer, more detailed questions that historically were difficult to monetize, while **Gemini's reasoning capabilities allow Google to identify intent and match more relevant ads**. Google cited a 20% improvement in the relevance of Shopping ads, and AI Max or Performance Max customers are seeing ~15% more conversions. Importantly, AI Max has already reached 500k advertisers after exiting beta, suggesting adoption remains early relative to Google's global advertiser base.

We therefore see AI as extending Search's monetizable surface area across informational, commercial-adjacent, and complex multi-step queries. The model is improving engagement, ad relevance, advertiser returns, and Google's ability to introduce formats such as contextual links, Direct Offers, and sponsored links within AI responses. **Cost-to-serve is also moving in the right direction, with Alphabet reducing AI Mode response costs to their lowest level since launch despite adding more sophisticated capabilities**. In our view, this combination supports durable high-margin growth rather than merely protecting the existing revenue base.

Comparisons become more demanding from 3Q, with the prior-year growth comparison increasing by approximately two percentage points. We therefore expect some moderation in reported growth despite underlying query and monetization trends remaining healthy. All in all, we contend that Search has entered the tougher comps with better product momentum and more monetization levers than investors feared heading into the print.

Cloud Beat a High Bogey and Is Becoming a Core Valuation Driver

Google Cloud revenue increased 82% y/y to \$24.8bn, meaningfully above our estimate of \$23.2bn, while operating income reached \$8.8bn and segment margin expanded to 35.6%. Margins were particularly strong given expectations for infrastructure costs, acquisition integration, and capacity constraints. Cloud's sequential revenue increase also appears to be approaching/exceeding the dollar

growth being generated by larger peers, reinforcing that Google is now competing at scale rather than simply growing quickly from a smaller base.

Demand indicators were also broad and consistently strong. **Backlog expanded by more than \$50bn q/q to \$514bn, with slightly more than half expected to convert within 24 months.** Customer acquisition velocity more than doubled y/y, existing customers exceeded commitments by more than 50%, and Cloud Marketplace transactions increased more than seven-fold. Nearly 90% of the Fortune 100 now use Gemini Enterprise, while 500 Cloud customers each processed more than 1tn tokens over the past year, and more than 2,000 enterprises consumed over 100bn tokens.

We contend that Cloud is now large enough that sustained outperformance can materially change Alphabet's consolidated revenue and earnings trajectory. Every incremental \$50bn of FY27 Cloud revenue, at a conservative 40% operating margin (below current 55% y/y incremental OI margins), would add approximately \$20bn of operating income and roughly \$1.33 of GAAP EPS. The current backlog, customer consumption, and supply constraints suggest upside to Cloud revenue may remain a catalyst for Google in the near to medium term .

There were no major deal-related announcements during the quarter, such as the multibillion dollar commitments from Anthropic or Meta in prior quarters, yet the backlog increased substantially and Google added almost \$5bn in revenue q/q. Along with that, usage KPIs are also growing at a fast clip, suggesting enterprise AI adoption likely is moving from experimentation toward production deployment.

TPU System Sales Expand Alphabet's Market Opportunity

Alphabet delivered TPU systems into customer-owned data centers for the first time during 2Q. The initial revenue contribution was modest, with the majority of revenue from existing system-sales agreements expected in 2027. Nevertheless, **the launch represents a meaningful strategic expansion. Google can now monetize its silicon and systems architecture through three channels: internal workloads, hosted Cloud capacity, and direct infrastructure deployments into customer environments.**

We view GOOG's full-stack offering as a key advantage. The company combines its proprietary TPUs, Nvidia accelerators, Axion CPUs, a global network, frontier models, security, analytics, agent platforms, and enterprise software. Its new Axion CPU delivers 30% better performance per dollar than peer offerings, while its networking architecture can connect accelerator clusters across multiple data-center sites. **We think this stack improves Google's ability to optimize performance and cost across customer workloads while reducing dependence on any single external chip supplier.**

Model Progress Is Solid, but Coding Remains the Area to Watch

Alphabet has begun its most ambitious pre-training run to date for Gemini 4, while the delayed Gemini 3.5 Pro remains in testing. At the same time, Gemini usage continues to scale: the consumer app reached 950mn MAUs, daily users tripled y/y, more than 9mn developers build with Google's models each month, and model API volume increased to 22bn tokens per minute from 16bn in 1Q. Gemma models have surpassed 900mn cumulative downloads, and Antigravity has reached 2.4mn weekly active users.

In our view these strong and growing adoption metrics lower the risk associated with the modest delay in the next flagship model. Alphabet is already translating model performance into Search monetization, Cloud consumption, security products, Workspace, agent tooling, and internal productivity. We still believe that frontier competitiveness is critical, particularly in coding and agentic workloads where Google has ground to make up. That said, we also note that Alphabet does not need to lead every public benchmark to generate attractive returns. It needs models that are sufficiently capable, efficiently served on its own infrastructure, and broadly distributed across products with billions of users and large enterprise relationships.

Capacity Is the Bottleneck, and Higher Capex Is the Rational Response

Alphabet remains supply constrained across both external Cloud customers and its internal businesses. Q2 capex was \$45bn, roughly double the prior year, with ~60% directed to servers and ~40% to data centers and networking equipment. The company raised FY26 guidance to \$195-\$205bn (from \$180-\$190bn) and continues to expect another significant increase in FY27 (we now model \$340-\$345bn, up from ~\$325bn).

From a demand stand point, Alphabet is investing to create capacity for strategic Cloud contracts, sell TPU systems, train Gemini 4 and subsequent frontier models, and serve inference across Search, YouTube, Gemini, Workspace, security, and agent platforms. Third-party bridge capacity (like the recent deal with SpaceX) allows the company to meet near-term commitments while owned infrastructure comes online, but that capacity is more expensive and is likely to weigh modestly on Cloud margins. Management nevertheless expects demand to remain ahead of supply, making capacity, rather than customer acquisition, the binding constraint on growth.

Negative FCF is the clearest near-term cost of these investments. To that end, operating cash flow of \$39bn was more than offset by \$45bn of capex, producing negative \$5.9bn of quarterly FCF, the first ever quarter of negative FCF since we started tracking it in 1Q03. Higher depreciation and third-party capacity costs will also likely constrain the rate at which revenue outperformance reaches EPS. These pressures are real, but they follow from scaling against contractual Cloud demand and accelerating usage across Alphabet's own products. We view this as an investment-timing issue rather than evidence of weak AI economics: GOOG is investing AHEAD of a large and growing opportunity for which the company has already demonstrated its ability to monetize AI at scale. Thus, in our view, the near term financial pressure is simply a function of scaling capacity today to meet tomorrow's demand.

A More Balanced Growth Model Supports a Higher-Quality Earnings Stream

Alphabet is evolving from a business led primarily by advertising into a three-engine model spanning advertising, Cloud services, and AI hardware. Search remains the funding engine and is benefiting directly from AI. Cloud has reached sufficient scale to materially impact consolidated growth and operating income. TPU systems add a new monetization channel that may ultimately extend beyond Google's owned infrastructure. Waymo also remains a credible additional option as autonomous-vehicle adoption expands.

This mix should improve the durability of Alphabet's long-term growth even if near-term margins and FCF become more volatile. Advertising monetizes consumer

intent; Cloud captures enterprise workloads and recurring consumption; hardware monetizes Google's infrastructure IP; and Waymo offers exposure to a potentially large transportation market. Across our coverage, few companies can combine this breadth of demand with proprietary infrastructure and global distribution.

Estimate Changes and Valuation

We raise our forward revenue and operating-income estimates to reflect stronger Search monetization, the Cloud beat, and continued backlog growth. We also raise our capex assumptions to ~\$202bn for FY26 and ~\$340-\$345bn for FY27, versus \$187bn and \$325bn previously. Higher depreciation largely offsets the operating-income benefit at the EPS line, leaving our FY27 GAAP EPS estimate broadly unchanged.

The market's negative reaction reflects a focus on higher capex, negative FCF, and potential near-term margin pressure. We think those concerns are adequately understood, while the magnitude of the revenue opportunity is likely to continue to remain a source of upside and upward revenue and OI revisions. Alphabet has already demonstrated AI monetization through Search, Cloud, subscriptions, and now TPU systems. Capacity investment today supports contracted external demand and a rapidly expanding set of internal workloads.

We therefore view last night's pullback as a buying opportunity. We maintain our Buy rating and price target of \$430, based on an unchanged 29x our FY27 GAAP EPS estimate.

Equity rating dispersion and banking relationships

Equity Rating and Dispersion Key

The Equity Rating Dispersion Chart depicts the following:

The proportion of recommendations that are rated "buy", "sell" and "hold" over the previous 12 months. This is shown for securities issued in the stated region e.g. "Europe Universe". See rating definitions below. This is represented by the "Companies Covered" bars in the chart. The percentage value displayed above the bar is the proportion as a percentage. E.g. 50% above the "buy" / "Companies Covered" bar means that 50% of DB's equity research covered companies over the past 12 months have a "buy" rating.

Next to each of the three respective bars showing the proportion of "buy", "sell" and "hold" recommendations we provide two additional bars to show:

- The proportion of "buy", "sell" or "hold" recommendations where Deutsche Bank and/or Affiliates provided MIFID Investment or Ancillary Services in the past 12 months. This is represented in the "MIFID Investment and Ancillary Services" bar. The percentage value displayed above the bar shows the proportion of Companies Covered with the given rating where DB has also provided MIFID Investment and Ancillary Services in the past 12 months. E.g. 50% above the "Cos. w/ MIFID Investment and Ancillary Services" bar means 50% of the Companies Covered with the rating stated have also received MIFID Investment and Ancillary Services from DB.

- The proportion of "buy" (or "sell" or "hold") recommendations where Deutsche Bank and/or Affiliates has provided Investment Banking services in the past 12 months for which it has received compensation. The percentage value displayed above the bar shows the proportion of Companies Covered with the stated rating where DB has also provided Investment Banking services in the past 12 months. E.g. 50% above the "Cos. w/ Investment Banking relationship" bar means 50% of the Companies Covered with the rating stated also have an Investment Banking Relationship with DB.

Buy: Based on a current 12-month view of TSR, we recommend that investors buy the stock.

Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

TSR = Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (<https://research.db.com/Research/>), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (<https://research.db.com/Research/>) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options', at <https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document>. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at <https://research.db.com/Research/> on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA and SIPC. Analysts located outside of the United States are employed by non-US affiliates and are not registered/qualified as research analysts with FINRA.

European Economic Area (exc. United Kingdom): Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at 21 Moorfields, London EC2Y 9DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong SAR: Distributed by Deutsche Bank AG, Hong Kong Branch except for any research content relating to futures contracts within the meaning of the Hong Kong Securities and Futures Ordinance Cap. 571. Research reports on such futures contracts are not intended for access by persons who are located, incorporated, constituted or resident in Hong Kong. The author(s) of a research report, and the entities for which they act and/or are affiliated with, may not be licensed to carry on regulated activities in Hong Kong and, if not licensed, do not hold themselves out as being able to do so. The provisions set out above in the 'Additional Information' section shall apply to the fullest extent permissible by local laws and regulations, including without limitation the Code of Conduct for Persons Licensed or Registered with the Securities and Futures Commission. This report is intended for distribution only to 'professional investors' as defined in Part 1 of Schedule of the SFO. This document must not be acted or relied on by persons who are not professional investors. Any investment or investment activity to which this document relates is only available to professional investors and will be engaged only with professional investors.

India: Prepared by Deutsche Equities India Private Limited (DEIPL) having CIN: U65990MH2002PTC137431 and registered office at 14th Floor, The Capital, C-70, G Block, Bandra Kurla Complex, Mumbai (India) 400051. Tel: + 91 22 7180 4444. It is registered by the Securities and Exchange Board of India (SEBI) as a Stock broker bearing registration no.: INZ000252437; Merchant Banker bearing SEBI Registration no.: INM000010833 and Research Analyst bearing SEBI Registration no.: INH000001741. DEIPL's Compliance / Grievance officer is Ms. Rashmi Poddar (Tel: +91 22 7180 4929 email ID: complaints.deipl@db.com). Registration granted by SEBI and certification from NISM in no way guarantee performance of DEIPL or provide any assurance of returns to investors. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: <https://www.db.com/ir/en/annual-reports.htm>. For latest India research audit report, refer https://country.db.com/india/deutsche-equities-india/index?language_id=1.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

and related information at https://www.dbresearch.com/PROD/RPS_EN-PROD/PROD0000000000521304.xhtml. Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG. It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
