- 3Q results could miss consensus; alongside fundamentals, share price performance also hinges on sentiment towards AI
- We maintain our positive view for 2027 given the planned *Ananta* launch
- Maintain Buy rating and USD162 target price

Trimming estimates: NetEase has rallied 6.5% from its low on 25 September (vs. -1.7% for KWEB), which we attribute to a rotation from AI-related to non-AI investments. However, we are becoming more cautious about the near-term earnings outlook due to a high comparison base for high-margin self-developed PC games and the weaker-than-expected performance of mobile games. We trim our 2026-28e non-GAAP net income forecasts by 1-3%, reflecting lower game revenue and margin assumptions. After updating our USD/RMB assumptions (from 6.72 to 6.65), we keep our target price unchanged at USD162 for the ADR. Our 2026e non-GAAP net income forecast is 6% below consensus. Maintain Buy: (1) we remain confident in *Ananta*'s revenue potential; (2) shareholder return plans (a combined dividend and buyback yield of c3-4% in 2026-27e) could act as a buffer; (3) NetEase's business is less exposed to macro risks and generates strong free cash flow without heavy AI spending; and (4) valuation is undemanding, with the shares trading at 12x 2027e PE, compared with forecast 16% non-GAAP operating profit growth in 2027.

Performance of key games in the third quarter: Data from QuestMobile, Sensor Tower and Steam, alongside our observations, show the following: 1) *Where Winds Meet*: both daily active users (DAU) and gross billings fell y-o-y and q-o-q in China for the iOS mobile version. The average Steam grossing rank declined q-o-q. 2) *FWJ*: the PC version continued to see impressive y-o-y growth in character prices, albeit at a slightly slower pace than in the second quarter; iOS mobile gross billings dipped y-o-y, despite strong DAU growth. 3) *Marvel Rivals*: the average Steam grossing rank dipped y-o-y and q-o-q. 4) *Eggy Party*: gross billings grew y-o-y alongside time spent per user. 5) *Identity V* and *Justice Mobile* both saw gross billings and DAU decline y-o-y. Overall, we forecast a y-o-y decline in gross billings in 3Q26, followed by a return to positive growth in 4Q26. **Pipeline**: 1) *Ananta*: scheduled for launch on 15 January 2027, with 25m pre-registrations so far; 2) *World of Warcraft: Forever*, which introduces new content and a storyline not present in the original game, is scheduled for release on 4 November 2026; 3) *Beneath the Mist*, a differentiated extraction shooter, completed its first test on 23 August; 4) *ECC: REDLINE*, an extreme sports tactical shooter targeting global PC and mobile markets, is undergoing PC testing from 15 to 22 October; 5) *Codename: Martial Arts Strategy*, a strategy game targeting China's PC and mobile markets, began its second test on 16 October.

3Q26 results may miss consensus: NetEase is due to report its third-quarter results in November. We expect game revenue/total non-GAAP operating profit growth of 6%/12% y-o-y (vs. Visible Alpha consensus of 9%/30%).

3Q26 results may miss consensus: NetEase is due to report its third-quarter results in November. We expect revenue to grow 4% y-o-y, game revenue to grow 6% (vs. Visible Alpha consensus of 9%) and deferred revenue to decline 8%. We expect non-GAAP operating profit to grow 12% y-o-y (vs. Visible Alpha consensus of 30%), reflecting our below-consensus forecasts for game revenue and gross profit margin. Non-GAAP net income could fall 5% y-o-y (vs. Visible Alpha consensus of +9%), given the high base for comparison resulting from investment gains in 3Q25 and a higher tax rate following the expiry of tax benefits for the music business.

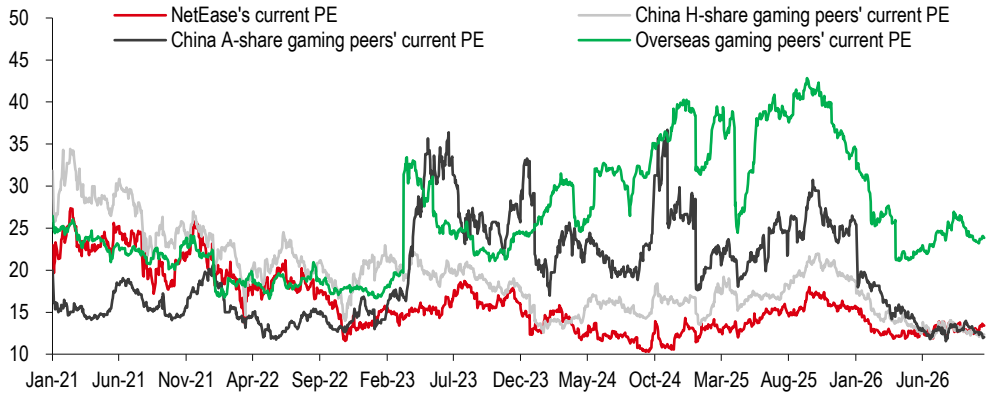

Valuation and risks

	Valuation	Risks to our view
NetEase NTES US Current price: **USD125.25** Target price: **USD162.00** **Buy** Up/downside: **29.3%**	**Methodology:** Sum of the parts approach (see table below). Our TP implies c29% upside, therefore we maintain our Buy rating. We are encouraged to see NetEase's successful game launches in new genres and its expansion into overseas markets. **Secondary listing**: For the local shares (9999 HK, HKD197.70), our target price of HKD254 (from HKD253) is based on our TP for NTES US, an end-2026 USD-HKD forecast of 7.83 (unchanged), and ADS-to-Hong Kong listed-share conversion ratio of 1-to-5.	Downside risks: ◆ Difficulty in obtaining game monetisation approvals ◆ New game launches missing expectations ◆ Significant declines from legacy titles ◆ Intense competition from Tencent and miHoYo

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

HSBC assigns ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Rating distribution for long-term investment opportunities

As of 30 September 2026, the distribution of all independent ratings published by HSBC is as follows:

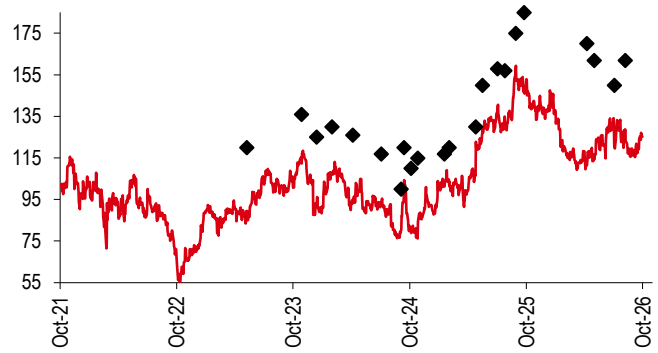

Buy	60%	(12% of these provided with Investment Banking Services in the past 12 months)
Hold	35%	(12% of these provided with Investment Banking Services in the past 12 months)
Sell	4%	(10% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at *http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures*.
